

Service Request Automation and Integration

The Kelverion Runbook Suite integrates into over 800 enterprise management tools used in your business to enable the automation of Service Requests from the Service Desk.

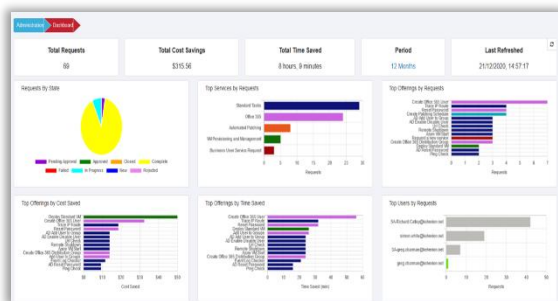

The Runbook Suite provides a platform to integrate and orchestrate third party systems to automate the day-to-day manual processes, which hinder and delay IT and Support Desk teams. The Suite contains a range of integration modules and ready-built solutions to help automate these service requests and provide a framework to automate any manual process.

Automate Service Requests

The Suite offers ready-built service request automation solutions;

- Joiners, Movers, Leavers
- Standard IT Tasks
- Office 365 Management
- Virtual Machine Provisioning and Management
- Event to Service Desk Incident Ticket
- Remote Diagnostics and Remediation
- Automated Patching

Systems Integration

The Suite provides 800+ integrations to other enterprise systems such as;

- Microsoft Azure
- Amazon Web Services
- Google Cloud
- Azure Dev Ops
- SQL Server & Oracle
- Atlassian Jira
- ServiceNow
- Microsoft SCCM
- Microsoft Hyper-V
- VMware vSphere

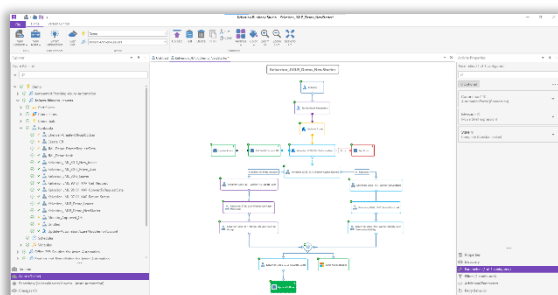

Discover High Return on Investment

Our easy to use Automation Value Calculator enables an organisation to see how much can be saved through automation, many of Kelverion's customers have achieved in excess of 400% ROI.

Reduce Process Cycle Time & Decrease Errors

Tasks no longer need to wait for different teams to perform manual actions, therefore increasing agility and eliminating bottlenecks. Automation performs a task the same way every time, which unlike manual fulfilment, reduces the risk of human error within your infrastructure.

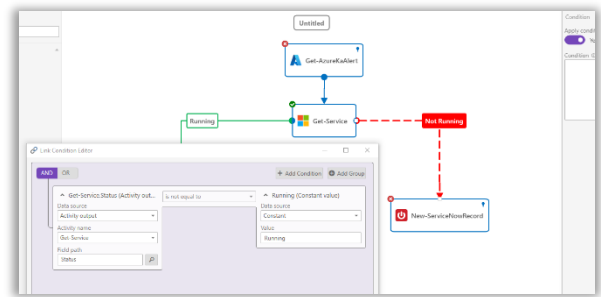

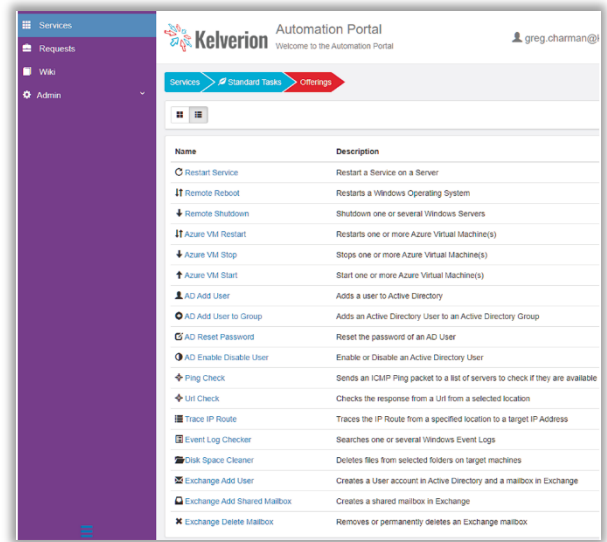

The Kelderion Runbook Suite provides a cloud-based automation platform with a rich graphical design experience, smart integrations and the option of an easy to configure self-service automation portal.

The solution runs on the Microsoft Azure Automation service, which provides best of breed scalability and a global hosting capability. The Azure service has no upfront costs, and the organisation is only charged whilst the automation is executing.

The Runbook Suite is subscription-based and starts at £3,865 per annum plus the Microsoft Azure cost of 0.2 pence per minute to execute the automated process. To put this in perspective, if the process ran continuously 24/7, the execution cost would be £90 per month.

Runbook Suite Benefits

- Cost savings
- Free up IT resource
- Significantly reduce process cycle time
- Removes process lags / delays
- Increase compliance
